The KIBI Media document viewer – for the sake of clarity

KIBI Media is a complete media solution for all healthcare professionals. Now, KIBI Media is even better.

Using our new document viewing solution, you can count on robust support in your day-to-day healthcare work. Document viewing in KIBI Media allows you to review documents from different points in time, adjust them and correct errors, rotate or flip images and save changes for future reference – all without changing the original image.

Document viewing also supports digitalised patient records as well as digital information in all systems. In other words: You can work with documents safe in the knowledge that they will integrate with your specific medical equipment and healthcare systems.

Document viewing expands the functionality of KIBI Media and you can of course add additional packages for image editing, frame capture, etc. in order to create a tool for today's modern medical information management needs – all with the greatest possible focus on patient safety.

A user-friendly interface allows you to work with greater confidence

Clarity, efficiency and security are the three foundation stones on which KIBI Media rests. Through a stable technical platform and the most user-friendly of interfaces, you can easily navigate through documents without losing focus on the information being displayed. Naturally, KIBI Media supports the vast majority of image formats, including PDF and TIFF.

KIBI MEDIA IN BRIEF:

A complete media solution that handles entire medical histories, images, videos, lab results and diagnostic reports.
With KIBI Media you can automatically collate, classify and index incoming medical material and link to patient records. KIBI's platform contains the very latest integration and storage techniques, such as XDS and VNA.
